

Responsible Digital Health Speaker Series #3 - Digital health during public health emergencies

People

Deadline: Closed

Type:	Webinar
Location:	Web Based
Date:	13 Oct 2020
Duration of event:	0 Days
Programme Area:	Decentralize Cooperation Programme
Specific Target Audience:	No
Website:	https://unitar.org/sustainable-development-goals/people/our-portfolio/online-events/
Price:	No Fee
Event Focal Point Email:	Julia.genth@unitar.org

BACKGROUND

The digital revolution continues to change the face of health systems the world over. At the 71st World Health Assembly (WHA), the World Health Organisation (WHO) recognised the full potential of the digital health revolution to enhance health service capacities and accelerate progress towards achieving health and wellbeing related Sustainable Development Goals (SDGs), especially SDG 3. They also recognised that the responsible and appropriate use of digital health solutions remains a great challenge. The potential for positive impacts through the application of digital health tools are clear, and it is often cited that they will be a key vehicle on the road to achieving Universal Health Coverage. However, poorly designed, unsustainable, unsafe and irresponsible digital health products can be a waste of time, energy and physical and financial resources, and more importantly can risk the wellbeing for those whose lives they were supposed to improve. Along this continuum of negative outcomes due to badly designed digital health tools, the perpetuation of stereotypes, the widening of the digital divide and the abuse of personal data are also key concerns.

The Digital Health Initiative aims to:

- Encourage and facilitate the sustainable, safe and responsible development and adoption of digital health products amongst international organisations, NGOs, the private sector and government organisations;
- Build capacity among health care workers, local governments, publics, and other end users;
- Ensure uptake and use of strong digital health tools and guidelines.

EVENT OBJECTIVES

In this webinar, we will explore the potential utility of digital health solutions during public health emergencies, their limitations and look at some of the problems and challenges that can arise from rapidly implementing solutions in response to emergencies, potentially without a robust legal and ethical framework in place to ensure that personal data is not abused.

LEARNING OBJECTIVES

At the end of this session, participants should be able to:

1. Describe some of the most useful digital health interventions that can be employed during public health emergencies
2. Identify some risk mitigation strategies for digital interventions that have been rapidly developed in response to emergency situations

CONTENT AND STRUCTURE

This Responsible Digital Health Speaker Series will feature experts from healthcare, academia, public and private sector.

TARGETED AUDIENCE

Participation is open to government officials, diplomats, staff of international organizations, development practitioners, faculty members, and administrators of educational institutions.
